

Environmental Treatment Without the Heavy Lifting.

Soil contamination happens every day, whether from oil and diesel spills to salt water incursion or cleaning chemicals. Full earth or waste water remediation and restoration are possible with BioS.I.'s Remediation Kit, saving your company time and money and getting documented results.

Bio S.I.'s field tested Remediation Kit
Rebuilds, Restores, Renews,
and Remediate contaminated areas.

Through Bioremediation, microbes and other soil life are used to return the contaminated environment to acceptable standards, rather than digging and hauling the contaminated soil from the original site.

Raves from customers confirm our success:

"While working on the city soccer fields our tractor broke down. Diesel and oil poured out causing a large dead area that wouldn't grow grass for two years. We then used BioS.I. Remediation Formula and within 30 days you could see the grass coming up and within 90 days it was green, and lush."
— Park Maintenance Supervisor, Texas

Remediation Kit Contains:

M-R-S #7

Activator

Melaco

5 Gallon Pail

Product Usage

Product Usage: Bio S.I. Remediation Kit is used to remediate oil, gasoline, diesel, or other hydrocarbon spills. The kit should be used where you need to clean up a contaminated area and treated according to the kit's instructions.

Each kit may be labeled for a particular site according to company identification protocol. Each kit contains one 5 gallon pail with screw-on lid, one quart of **Activator**, one quart of **Melaco**, and one gallon of **M·R·S #7**.

We Work With You!

Bio S.I. supports their brands through national radio and print advertising and educational media placements to drive them into stores and POP and informative store displays to increase sales.

The benefits of using Bio S.I. M·R·S #7

- Treatment of spills on site, eliminating the need to dig and haul, which keeps you out of the chain of custody regulations.
- Removal of Hydrocarbons from wastewater to ease the load on the wastewater treatment plant.
- Remediation of spills within secondary containment areas to ensure compliance with storm water management plans.
- Expediting the process of tank cleaning by converting heavy, oily sludge to light floating sludge.
- Remediation of remote areas where mobilization of traditional equipment is not possible.
- Confidentiality is our highest concern.

Activator

Quart - 32 fl. oz.

Dimensions: **7.5H" x 2.4W" x 5.2L"**
