Don't "Waste" Your Time and Money on a Problematic Septic System Bio S.I.'s Septic Cleanser Formula Offers an All-Natural Microbial Product that Digests Solids and Organic Matter in Septic Systems

Justin, TX – June 2012 – Septic systems are environments that thrive on natural microbes that digest septic matter. The health of these environments can be jeopardized by chemicals and additives that are hazardous to the health of the naturally existing microbes that drive the system and this, in turn, can put septic tank users at risk of incurring additional costs for pumping and repairs.¹ The secret to maintaining an efficient septic system is to maximize the amount of microbes in the tank while minimizing the amount of chemicals. Therefore, septic cleaners that use chemicals to improve septic systems may actually be harming the microbes ability to function and increasing the likelihood of a septic back up and odor from gas. Bio S.I. Technology (www.biositechnology.com) understands that the best way to prevent septic problems is to add nothing more than the beneficial microbes that break down the matter. Bio S.I.'s Septic Cleanser is an effective, all-natural formula that does just this to keep home and RV septic tanks and pipes clean, clear, and free of unnecessary repairs and maintenance.

Bio S.I. Septic Cleanser is comprised of eco-friendly microbes and enzymes that digest the organic matter that builds up in home and RV septic systems. The Septic Cleanser uses the microbes to effectively preserve time and money while being safe for people, pets, and planet. This formula is composed of all-natural ingredients that are versatile in their ability to improve septic systems function. In addition to applying the Septic Cleanser directly to septic systems to ensure it works properly, homeowners can apply the formula to their lawn to aerate the soil in the leach field area and thereby reduce the chance of wet spots in the leach field or lawn. With respect to septic system maintenance, it is better to be safe than sorry. Bio S.I. Septic Cleanser makes being safe as easy as pouring one quart of Septic Cleanser down the toilet each month. Bio S.I. Septic Cleanser offers a simple once a month application to help control septic problems.

"A simple, organic system requires simple, organic solutions," explains Bio S.I. Technology's owner, Wayne Tucker. "By keeping this formula natural, we have created a solution that will improve septic system efficiency while also benefitting your lawn by improving the ability of the soil to allow liquid to move into the soil reducing the dreaded wet spots in the lawn." Septic Cleanser boosts the breakdown of the waste within the septic system and results in a more efficient system that requires less maintenance, has less odor, and functions properly.
