With Summer in Full Swing, Maintain Soil Vigor throughout Your Yard by using Bio S.I. Lawn and Garden Formula

Justin, TX – June 2013 – Summer is prime time to enjoy the beauty of an outdoor garden, but unfortunately the work doesn't just disappear during the warmer months. In the summer heat, maintaining a home garden is no small task. Whether you have raised vegetable beds, sprawling manicured lawns, flowerbeds packed with perennials, or even just a potted patio garden, it takes work to keep plants alive in the heat. In fact, according to GoGardenGo Gardening Community, necessary tasks include regular watering, deadheading, pruning, staking vulnerable plants, and pest management.¹

Bio S.I. Technology (www.biositechnology.com) Lawn and Garden Formula aims to make life easier for hard working gardeners by making the soil work harder. Bio S.I. Lawn and Garden Formula is a soil inoculant with a broad and diverse spectrum of naturally occurring beneficial microbes for rebuilding the soil. It addresses some of the biggest summer gardening issues:

Issue: Not properly preparing soil or adequately mulching

Solution: Often times, we are in a hurry to get your plants in the ground before temperatures rise, novice gardeners fail to adequately prepare the soil by using the right inputs. Lawn and Garden Formula can be applied after planting to accomplish a similar function: breaking down organic matter (plant debris) and improving nutrient availability.

Issue: Difficult to maintain watering schedules

Solution: With busy summer calendars including frequent day trips and out-of-town events, it isn't realistic to never miss a scheduled watering. Use of Lawn and Garden Formula will increase water penetration and retention, lowering the overall amount of water needed and ensuring that one skipped watering won't be a death sentence for plants.

Issue: Unsightly debris among plants keeps the garden from being picture-perfect

Solution: The microbes in Lawn and Garden Formula work their magic to decompose and break down organic materials, easily clearing unsightly debris, dead clippings, and withered bits that would otherwise muddy the view.

Bio S.I. Lawn and Garden Formula can be applied quickly and easily by attaching a hose to the product bottle and dispensing using the included spray nozzle. Only four to six ounces are needed per 1,000 sq. ft. (20'x50'). With minimal yet focused efforts and the right products, gardeners can enjoy unprecedented beauty and yield from their yards this summer.
