Bio S.I. Technology Launches New Website at the 2014 World Ag Expo

Visit www.biositechnology.com to learn about Bio S.I.'s all-natural solutions to rebuild, restore and renew vitality to you soils, facilities and crops

Justin, TX- February 11, 2014 – Bio S.I. Technology (www.biositechnology.com), sustainable agriculture experts and leading producer of microbial soil inoculants, is excited to announce the launch of their new website at the 2014 World Ag Expo, taking place February 11-13, in Tulare, CA. The new site provides agricultural experts, researchers and consumers with white papers, instructional videos and testimonials about the use of microbes and the effectiveness of Bio S.I. Technology products across a wide range of agricultural applications. The site's new resources will offer growers, gardeners and ranchers new techniques to rebuild, restore, and renew vitality to their soils and improve bottom lines.

According to the USDA, the number of United States farms fell to a 6 year low of 2.17 million in 2012 after losing 11,630 in 2011.¹ As climate, regulations, consumer preferences and cultivation techniques continue to change and evolve; agriculture seemingly confronts new barriers to growth daily. Bio S.I. Technology's all-natural microbial formulas provide agribusiness with safe, environmentally sustainable solutions to rebuild, restore and renew vitality to soils and farms.

Bio S.I. Technology's microbial formulas can help reduce overall input costs to farm and keep farmers in business by increasing their bottom lines. Bio S.I. Technology founder and sustainable agriculture expert, Wayne Tucker, is receiving reports from farms that use Bio S.I. products and have experienced improved harvests while reducing water and fertilizer consumption considerably over their previous agriculture practices.

REBUILD. RESTORE. RENEW.

Bio S.I. Technology's blend of all-natural beneficial microbes penetrates damaged soils to displace pathogens and convert wastes to new usable forms of carbon. As soil life improves, growers will require less water and nutrients to produce successful harvests. Ranchers and facility managers using Bio S.I.'s microbial formulas will experience a decrease in unpleasant odors from holding pens and improvements in livestock's ability to assimilate nutrients and gain weight when they incorporate Jackpot and Floor-Mate into their stock programs.

Visit www.biositechnology.com or stop by World Ag Expo Building C Booth #3810 to learn how Bio S.I. Technology's scientifically proven microbial formulas will help improve agriculture's bottom line by rebuilding, renewing and restoring vitality and nutrition to soils, livestock and crops.

About Bio S.I. Technology

Bio S.I. Technology, LLC is a USDA BioPreferred™ member and includes a team of experts who have over 20 years' experience producing microbial products.
