### **As Demand for Organic Foods Soars, Bio S.I. Aims to Rebuild, Restore, and Renew Soil Life to Grow Profits**

*Visit booth #3810 at World Ag Expo to learn more about Bio S.I.'s microbial inoculants and meet Sustainable Agriculture expert Wayne Tucker*

**Justin, TX- January 2, 2014** – The rising demand for organic and sustainably grown food has prompted agribusiness to search for new solutions to satisfy heightened appeals for healthy, nutrient dense, chemical free crops. USDA data supports astounding growth in the organic food sector, as total sales have risen from \$11 billion in 2004 to over an estimated \$30 billion in 2013.<sup>1</sup> Bio S.I. Technology ([www.biositechnology.com](http://www.biositechnology.com)) will be exhibiting at the 2014 World Ag Expo, booth #3800, to showcase their products for agriculture, livestock, and stubble digestion. These products are successfully used in sustainable programs as well as organic regimens. They are all-natural and contain soil-borne microbes that help rebuild soil life by increasing the humus, or carbon fraction of the soil and minimizing the negative effects of leftover plant residues. Bio S.I.'s animal probiotics are all natural and do not contain any preservatives. Additionally, all of Bio S.I. Technology's products are liquid-base, mix-free and ready to use.

Sustainable agriculture expert and Bio S.I. Technology founder Wayne Tucker will be exhibiting at the 2014 World Ag Expo to showcase Bio S.I.'s expanding line of microbial soil inoculants and provide family farmers and large agribusiness alike, with expert advice and sustainable solutions to boost production and improve the life of their land, livestock and crops.

Bio S.I. Technology is a leader in proven, safe-to-use, all-natural microbial products for commercial agriculture, livestock, turf, water treatment, and soil reclamation applications. The beneficial microbes aid in breakdown of plant debris, as they penetrate the soil they help breakdown and fight salt, protein, and chemical buildups in the soil. The Ag Formula and Ag Select (with mycorrhizae) work to free up nutrients that generate new growth and increase

beneficial bacterial activity. Bio S.I.'s agricultural products are approved for organic use through the CDFA.

**Stop by World Ag Expo Booth #3810** to meet with expert Wayne Tucker and learn how the new Bio S.I. Technology products can help your farm implement natural and sustainable processes to restore life, generate growth and boost profits.

#### **Jackpot and Jackpot II (For Equine):**

Jackpot's probiotic formula adds beneficial soil-borne microbes into the digestive tracks of livestock and small animals. Microbes help maintain livestock's digestive system by increasing bacteria levels to attain optimum, stress free digestion of food. When livestock are held in contained areas or transported, stress impairs their digestive process, reducing the uptake of nutrients essential to good health and adequate weight gain. Simply adding Bio S.I.'s Jackpot to your animal's water or feed will help them overcome impaired digestion and get their guts working properly again. This helps maintain livestock's weight, improve overall health and calm anxiety. Jackpot or Jackpot II should be used after deworming, antibiotic use, changes in feed or prior to shipping to reduce stress, decrease recovery times and grow profits. Jackpot and Jackpot II are **free of any preservatives or other additives.**

#### **Floor-Mate:**

Use the power of nature to quickly and safely improve conditions in areas where livestock is held. Floor-Mate brings beneficial soil borne microbes found in nature to the inside of livestock facilities. Microbes naturally break down the proteins, salts, and other materials found in urine and fecal matter that cause musty, unpleasant odors such as ammonia. Floor-Mate is an all-natural, safe and effective way to improve conditions anywhere livestock is held including poultry houses, turkey houses, swine facilities, dairy barns, and horse stalls. The microbes in Floor-Mate out-compete and reduce the effects of harmful odor and disease causing pathogens.

#### **SD 25: Stubble Digester**

SD 25 uses beneficial microbes to breakdown last year's crop residue and convert it to usable humus that holds nutrients and water in the rhizosphere. Plus it ensures that valuable nutrients that would otherwise be tied-up in the stubble are unlocked and released back into the soil for future use. SD 25 improves the speed of stubble decomposition with a proprietary mixture of cellulose digesting microbes, a broad range of other naturally occurring microbes, and humic acid to fuel microbial activity. Proper application will speed up the process of natural decay and recycling of valuable nutrients back into the soil for next season's crops; reducing the overall input requirements for the next crops in most cases. Additionally, stubble provides a place for pathogens to "over-winter" and multiply. SD 25 helps remove this natural cover for the pathogens (diseases) and convert it to valuable humus.

### **About Bio S.I. Technology**

Bio S.I. Technology, LLC is a USDA BioPreferred™ member comprised of a team of experts with over 20 years' experience producing microbial products. Bio S.I. produces a full range of microbial inoculants including Bio S.I. Turf Formula, Turf Select, Lawn & Garden Formula, Lawn & Garden Select, Agriculture Formula, Pond Formula, Septic Cleanser Formula, Remediation Formula and Jackpot I & II, new natural pro-biotic products formulated to bring beneficial soil borne microbes inside your valuable livestock's digestive track. For more information about Bio S.I. Technology, or to purchase their cutting-edge formulas, please visit [www.biositechnology.com](http://www.biositechnology.com).

If you would like further information, images, or to schedule an interview with Wayne Tucker, founder of Bio S.I. Technology, please contact Steve Manee via email at [smanee@christiecomm.com](mailto:smanee@christiecomm.com) or by phone at 805-969-3744.
