Spring is Here and Summer's Near!

Prep gardens and turf with Bio S.I. Technology's all-natural microbial formulas

April, 2014-Justin, TX – Spring has sprung and the summer heat is right around the corner. As much of the Western United States copes with monumental drought, hobbyists and industry professionals alike must become proactive and take measures to improve soils natural ability to hold water and support plant and turf growth. Soil tilth, water and nutrient retention, coverage, plant stand, colors and yields can all be improved using Bio S.I. Technology's (www.biositechnology.com) all-natural microbial formulas.

Microbes penetrate damaged soils to digest wastes and convert unused organic matter to valuable humus, also known as "Black Gold." Humus acts as a sponge that traps nutrients and water in the rhizosphere; holding on to them until required by the growing plants. "As gases naturally diffuse in and out of the soil, it gently "breathes," releasing air with a high percentage of carbon dioxide and taking in air with a higher concentration of oxygen. Plants above the soil reuse the carbon dioxide, grow, and bear fruit. In this way, the carbon cycle is completed."¹

A successful carbon cycle is dependent upon active, lively soils. Bio S.I. Technology's organic microbial soil inoculates penetrate damaged soils and rebuild vitality naturally. The Turf Formula and Lawn & Garden formulas act as bio-stimulants that help release bound up soil nutrients that would otherwise be unavailable for plant use. As soil's condition improves, compaction and crusting are reduced which effectively lowers volumes of chemical fertilizers and water required to achieve optimal growth. Bio S.I. Turf Formula inoculants for use on golf courses, baseball fields, and other sports complexes will reduce the negative effect of thatch build up. The microbes digest the plant debris allowing water and nutrients to reach the soil. The Lawn and Garden Formula does this for lawns reducing water and fertilizer costs. With costs for fertilizers rising and demand for precious water resources growing, Bio S.I.'s microbial formulas offer safe, economical ways to keep colors popping and greens growing year-round.

About Bio S.I. Technology

Bio S.I. Technology, LLC is a USDA BioPreferred™ member and includes a team of experts who have over 20 years' experience producing microbial products. Bio S.I. produces a variety of all-natural microbial products including Bio S.I. Turf Formula, Turf Select, Lawn & Garden Formula, Lawn & Garden Select, Agriculture Formula, Pond Formula, Septic Cleanser Formula, Remediation
