As Demand for Organic Foods Soars, Bio S.I. Aims to Rebuild, Restore, and Renew Soil Life to Grow Profits

Visit booth #3810 at World Ag Expo to learn more about Bio S.I.'s microbial inoculants and meet Sustainable Agriculture expert Wayne Tucker

Justin, TX- December, 2013 – The rising demand for organic and sustainably grown food has prompted agribusiness to search for new solutions to satisfy heightened appeals for healthy, nutrient dense, chemical free crops. USDA data supports astounding growth in the organic food sector, as total sales have risen from \$11 billion in 2004 to over an estimated \$30 billion in 2013.¹ Bio S.I. Technology (www.biositechnology.com) will be exhibiting at the 2014 World Ag Expo, booth #3810, to help farmers reduce costly and environmentally hazardous agricultural inputs and improve their livestock and crops' natural ability to assimilate nutrients and combat harmful pathogens.

Sustainable agriculture expert and Bio S.I. Technology founder Wayne Tucker will be exhibiting at the 2014 World Ag Expo to showcase Bio S.I.'s expanding line of microbial soil inoculants and provide family farmers and large agribusiness alike, with expert advice and sustainable solutions to boost production and improve the life of their land, livestock and crops.

Bio S.I. Technology is a leader in proven, safe-to-use, all-natural microbial products for commercial agriculture, livestock, turf, water treatment, and soil reclamation applications. The beneficial microbes aid in cellular decomposition and decay, as they penetrate environmentally harmful waste, sludge, salts, proteins and chemical buildups to breakdown cells, combat odors and unlock nutrients that generate new growth and beneficial bacterial activity.

Stop by World Ag Expo Booth #3810 to meet with expert Wayne Tucker and learn how the new Bio S.I. Technology products can help your farm complement natural processes to restore life, generate growth and boost profits.

Jackpot and Jackpot II (For Equine):

Jackpot's probiotic formula brings beneficial soil-borne microbes into the digestive track of grazing animals. Microbes help maintain livestock's digestive system by increasing bacteria levels to attain optimum, stress free digestion of food. When livestock are raised in contained

REBUILD. RESTORE. RENEW.

areas, stress causes them to digest food improperly, restricting access to and uptake of nutrients essential to good health and adequate weight gain. Simply adding Bio S.I.'s Jackpot to your animal's water or feed will reduce unnecessary stress caused by deworming, antibiotic use or changes in feed or the environment, resulting in healthier animals and bigger profits.

Floor-Mate:

Use the power of nature to quickly and safely improve conditions in areas where livestock is held. Floor-Mate brings beneficial soil borne microbes found in nature to the inside of livestock facilities. Microbes naturally break down the proteins, salts, and other materials found in urine and fecal matter that cause musty, unpleasant odors such as ammonia. Floor-Mate is an all-natural, safe and effective way to improve conditions anywhere livestock is held including poultry houses, dairy barns and horse stalls.

SD 25:

SD 25 uses microbes to breakdown last year's crop stubble and convert it to valuable humus that provides nutrients to the rhizosphere. SD 25 maximizes the speed of decomposition with a proprietary mixture of cellulose digesting microbial fungi, a broad range of other naturally occurring microbes, and humic acid to fuel microbial activity. Proper application will speed up the process of natural decay and recycle valuable nutrients back into the soil for next season's crops; eliminating the need for costly digging and hauling to prepare fields for new plantings.

About Bio S.I. Technology

Bio S.I. Technology, LLC is a USDA BioPreferred™ member comprised of a team of experts with over 20 years' experience producing microbial products. Bio S.I. produces a full range of microbial inoculants including Bio S.I. Turf Formula, Turf Select, Lawn & Garden Formula, Lawn & Garden Select, Agriculture Formula, Pond Formula, Septic Cleanser Formula, Remediation Formula and Jackpot I & II, new natural pro-biotic products formulated to bring beneficial soil borne microbes inside your valuable livestock's digestive track. For more information about Bio S.I. Technology, or to purchase their cutting-edge formulas, please visit www.biositechnology.com.

If you would like further information, images, or to schedule an interview with Wayne Tucker, founder of Bio S.I. Technology, please contact Jessica Kopach via email at jkopach@christiecomm.com or by phone at 805-969-3744.
